Launch of new ELISA and ELISpot kits for Cow and Sheep IFN- γ and IL-4

Dear Researcher,

We are pleased to launch new immunoassay kits and reagents for bovine IFN- γ and bovine IL-4 as of April 26th, 2012.

Mabtech's reagents and ELISpot/ELISA kits for bovine IFN- γ will be replaced by new reagents and kits based on newly developed monoclonal antibodies to bovine IFN- γ . The new reagents and kits display detection sensitivity fully comparable to the previous products.

In addition, reagents and kits for bovine IL-4 will be launched.

Both the bovine IFN- γ and IL-4 kits display high cross-reactivity with ovine IFN- γ and IL-4, respectively, but do not cross-react with equine IFN- γ or IL-4.

The discontinued reagents and kits for bovine and ovine IFN- γ will be available upon request until June 30th.

For a complete listing of our kits and reagents for bovine IFN- γ and IL-4 as well as equine IFN- γ , please see the back of this page.

If you have any questions regarding the assays for bovine and ovine IFN- γ and IL-4 or equine IFN- γ , we encourage you to contact us and welcome any comments you may have.
